## CT Chest with Contrast (Mild Pneumonitis)

### **TECHNIQUE:**

Multidetector CT of the chest performed in axial sections before and after IV contrast. Coronal and sagittal images obtained.

---

### **FINDINGS:**

- Patchy areas of ground-glass opacity seen in the **posterior segment of the right lower lobe**, suggesting mild pneumonitis.
  - No evidence of consolidation or cavitation.
  - Minimal right pleural effusion.
  - Rest of the lung fields are clear.
  - Mediastinal and hilar regions appear normal.
  - Cardiac and vascular structures within normal limits.
- 

### **IMPRESSION:**

**Mild right lower lobe pneumonitis with minimal pleural effusion.**

---
